EDUCATION

FEU INSTITUTE OF TECHNOLOGY **Manila, Philippines**

Bachelor of Science in Computer Science *Expected 2026*

- **Thesis:** RoaDry: Real-Time Flood Monitoring and Safe Route Optimization in Metro Manila Using Crowdsourcing, Web Scraping, and Graph-Based Algorithms for Android and iOS.
- **Relevant Coursework:** Object-Oriented Programming (Python, C++, Java), Data Structures, Algorithms, Machine Learning, Web Development (HTML, CSS, PHP), Mobile Application Development.

SAN FELIPE NERI CATHOLIC SCHOOL **Mandaluyong, Philippines**

Science, Technology, Engineering, and Mathematics *2022*

PROFESSIONAL EXPERIENCE

Reed Elsevier (RELX)

Automation Developer Intern Dec 2025 – Mar 2026

Resource Tracker (DEVUTIL v2)

- Managed the end-to-end development and server deployment of a full-stack tracking application to replace legacy, manual Excel-based workflows.
- Engineered the backend using Python and Django Ninja, paired with a React frontend and a SQL database, managing strict codebase versioning and continuous integration via Azure Repositories.
- Maintained live server environments and executed feature updates directly inside the server to guarantee uninterrupted, real-time resource allocation capabilities for management.

DSP Tool (Engagement Oversight)

- Architected and independently deployed the frontend using React, TypeScript, and Node.js, seamlessly connected to a Python/Django server-side framework.
- Delivered a centralized dashboard to streamline project progress tracking, expense calculation, and financial burn rate monitoring.
- Utilized Azure Repositories for enterprise-grade version control and integrated Power Platform components to align application delivery with broader corporate infrastructure.

Process Landscaping

- Co-developed a centralized workflow visualization tool, driving the initial UI/UX design and frontend React implementation to map core operations.
- Engineered dynamic process-mapping interfaces to identify systemic bottlenecks, connecting frontend components directly to backend API endpoints within a collaborative full-stack workflow.
- Managed server-side deployment iterations and pulled live feature updates, utilizing Azure Repositories to maintain synchronization between development branches and enterprise data models.

PROJECTS

CaraBuddy *Personal Finance Application*

- Developed a secure, local-first mobile application focused on delivering a stress-free budget management experience.
- Leveraged Supabase as the backend, handling database management, authentication, and real-time data synchronization while keeping user data private and fully controlled.

- Architected the application to prioritize user privacy and data control, ensuring all personal financial data remains localized.

RoadDry: Real-Time Flood Monitoring and Safe Route Optimization *Project Manager* 2024 – 2025

- Led and coordinated a multidisciplinary team throughout system programming and research documentation, ensuring efficient task distribution and timely deliverables.
- Learned and implemented the Dart programming language for cross-platform mobile application development.
- Configured Firebase for robust database management and real-time data synchronization.
- Integrated Azure Vision AI for advanced image processing to accurately detect and classify flood scenarios.
- Developed APIs and utilized web scraping with NLP techniques to aggregate verified safety data from various news outlets.
- Applied Dijkstra's algorithm to compute the shortest and safest travel routes leveraging open-source road network data.
- Conducted rigorous end-to-end testing, validating image processing accuracy, path generation, and crowdsourced data rendering.

KwikSlot: Cinema Booking System *Personal Project* 2025

- Developed a modern full-stack cinema booking platform featuring a complete booking flow, interactive seat mapping, and a comprehensive admin dashboard for real-time system management.
- Architected a modular React and TypeScript application with Context API for global state management, and Tailwind CSS and Vite for a fast, responsive dark-mode UI.
- Engineered an interactive 8×10 seat grid component with VIP pricing tier logic and real-time booking conflict resolution simulation.
- Built a multi-step checkout flow with payment simulation and an admin dashboard featuring revenue charts and user management.

SKILLS & INTERESTS

Languages: Fluent in Filipino and English; Basic conversational Mandarin (Pinyin).

Technical Skills: Python, C++, Java, Dart, JavaScript, TypeScript, React, Django, Django Ninja, HTML, CSS, Tailwind CSS, Vite, SQL, Firebase, Supabase, Power Platform.

Certifications: DevNet Associate Course, PMI Project Management, ITS Python, CCNA: Introduction to Network, Civil Service Eligibility (Professional Level).

Interests: Full-Stack Development, Travel, Gaming.
